NEWS RELEASE**

**EEL-TSX.VENTURE
EAT- FRANKFURT**

**20,000 METRE PHASE II DRILLING PROGRAM RESUMES ON THE DOÑA AMELIA
ZONE**

Eaglecrest Explorations Ltd. (EEL-TSX.VENTURE & EAT.FSE FRANKFURT) is pleased to report that Major Drilling International Inc. has resumed the remaining 12,000 metres of diamond drilling of Phase II on to the Company's Doña Amelia zone. The Doña Amelia zone covers an area of 40 square kilometres within the Company's 298.84 square kilometres San Simon project in northeastern Bolivia.

In 2004 the Company completed 8,000 metres of diamond drilling of the 20,000 metres Phase II program. Major Drilling International Inc. has two Boyles 56 drills on the property capable of drilling PQ (85 mm) and HQ (63.5 mm) core sizes, and during the 2004 program 25% of the drilling was PQ size with the remaining 75% being HQ size. The initial drill holes were started on May 2, 2005 and are drilling the down dip part of main quartz vein/structure (MQV) in the area of the planned decline and drifts in the Trinidad area. A pilot hole for the planned decline has been collared which will trace the MQV down dip along the projected path of the planned decline.

A drill platform has been prepared for a PQ size pilot hole for the planned decline in the Trinidad area 50 metres west of the Trinidad pit between section 597700 E with MQV intersections in TRD04-086 (2.3 metres) and TRD04-096 (3.2 metres) and section 597750 E with MQV intersections in TRD96-025 (3.7 metres), TRD03-033 (3.1 metres) and TRD04-098 (12.4 metres). The pilot hole will be drilled down dip of the MQV to collect information about ground conditions and local changes in dip for the final design of the decline.

To date 25,209.7 metres of diamond drilling has been completed in 121 holes in the Doña Amelia zone. The drilling was aimed at tracing the MQV in the major east-west structure of the Doña Amelia zone along strike and down dip. Diamond drilling has generally been done on 100 metres centers, but locally it has been carried out at a decreased spacing of 50 metres.

The diamond drilling program is being supervised by Tor Bruland, P. Geo. and Don Allen, P. Eng., both of whom are Qualified Persons under the Canadian National Instrument 43-101 Standards of Disclosure for Mineral Projects.

On behalf of the Board of Directors,

Carl A. Erickson
President, Eaglecrest Exploration Ltd.
